TRADINGVISIONX / GOLD SNAP

Gold EA: Before you buy.

A five-check worksheet for evaluating an MT5 trading robot.

01 Identify the exact setup

Record EA version, input preset, broker symbol, timeframe and lot sizing. A product name alone does not identify a test.

02 Keep the test reproducible

Save the date range, starting deposit, leverage, tick model and report. Check the quality and availability of the underlying price history.

03 Account for trading costs

Record spread, commission and execution assumptions. Compare a less favorable cost scenario; the cost calculator is arithmetic, not a return forecast.

04 Read beyond net profit

Review equity drawdown, trade count and losing periods. Keep a separate, untouched historical period for a check after choosing settings.

05 Check the demo and purchase terms

MQL5 Market demo EAs run in the Strategy Tester, not on online charts. Confirm current price, license and setup requirements on the listing.

Explore Gold Snap

Read the developer guide, then review the demo and terms on MQL5.
