Tickmill-Live | Initial deposit USD 400
History spans settings/versions; not the same setup as the historical test.

**SEPARATE 2.3UP HISTORICAL TEST**

# +67.95%

Net return on the USD 1,000 test deposit

**USD 1,679.47** final balance
**1.77%** maximal equity drawdown
**254 trades** | Profit factor **3.68**

Fixed 0.01 lot | Historical simulation
1 Jan 2025 - 11 Nov 2026 (end exclusive)
Completed 11 Nov 2026.

### The conditions behind the numbers

Live: MQL5 signal 2362714, leverage 1:100; 137 XAUUSD trades and 2 GBPUSD trades. Histories may span versions and presets, so the live result is not attributed to the 2.3UP test below. Balance drawdown and equity drawdown are different measures.

Test: ICMarketsSC-MT5-6, XAUUSD H2, Signal 2, real ticks, USD 1,000, leverage 1:100 and fixed 0.01 lot. Commission USD 20.32 and swaps USD 3.30 were included as costs. Friday Protection and the news filter were off. Rejected orders/modifications were logged. One historical run; not independent out-of-sample validation or the default risk-based preset.
